#### A. Source Code Debugging

#### 1) helper.js/test

```
Gunakan file ini untuk membuat test case dengan Jest
      const{
          incrementQty,
          decrementQty,
          recalculateSubtotal,
          absoluteQty,
          hitungDiskon,
          total
      } = require('../helpers.js')
      test('Qty 1 jika ditambah 1 hasilnya 2', () => {
          expect(incrementQty(1)).toBe(2);
      });
      test('Qty 1 jika ditambah "1" hasilnya 2', () => {
          expect(incrementQty("1")).toBe(2);
      });
      test('Qty 2 jika dikurangi 1 hasilnya 1', () => {
          expect(decrementQty(2)).toBe(1);
      });
      test('Jika Qty -3, maka menjadi 1', () => {
          expect (absoluteQty(-3)).toBe(1);
      });
      test('jika harga 50000 dan Qty 2 hasilnya 100000', () => {
          expect(recalculateSubtotal(50000, 2)).toBe(100000);
      });
      test('total harga dari barang 50000 dan qty 2 dengan kode "DISKON25
      maka hasilnya 75000', () => {
          expect(total(50000,2,'DISKON25')).toBe(75000);
});
```

#### 2) helper.js/src

```
const incrementQty = (qty) => parseInt(qty) + 1;
const decrementQty = (qty) => parseInt(qty) - 1;

function recalculateSubtotal(price, qty) {
    return price * qty;
}

function total(price, qty, kode) {
    return recalculateSubtotal(qty, price) - hitungDiskon(price, qty, kode);
}

function absoluteQty(qty) {
    return (parseInt(qty) < 1) ? 1 : qty;
}

function hitungDiskon(price, qty, kode) {
    const subTotal = recalculateSubtotal(price, qty);
    switch (kode) {
        case "DISKON10":</pre>
```

```
hasilDiskon = subTotal * 0.10;
            break;
        case "DISKON25":
            hasilDiskon = subTotal * 0.25;
            break;
        case "DISKON50":
            hasilDiskon = subTotal * 0.50;
            break;
        default:
            hasilDiskon = 0;
            break;
    return hasilDiskon;
module.exports = {
   incrementQty,
    decrementQty,
    recalculateSubtotal,
    absoluteQty,
    total,
    hitungDiskon
```

#### 3) app.js

```
import {
 incrementQty,
 decrementQty,
 recalculateSubtotal,
 absoluteQty,
 total
} from './helpers.js';
const incrButton = document.querySelector('#incr');
const decrButton = document.querySelector('#decr');
const okButton = document.querySelector('#confirmButton');
const qtyInput = document.querySelector('#qty');
const price = document.querySelector('#price');
const subtotal = document.querySelector('#subtotal');
const codeInput = document.querySelector('#code');
incrButton.addEventListener('click', () => {
 qtyInput.value = incrementQty(qtyInput.value);
 subtotal.textContent = `Rp.
${total(qtyInput.value, price.value, codeInput.value)}`;
decrButton.addEventListener('click', () => {
 qtyInput.value = decrementQty(qtyInput.value);
 qtyInput.value = absoluteQty(qtyInput.value);
 subtotal.textContent = `Rp.
${total(gtyInput.value, price.value, codeInput.value)}`;
});
okButton.addEventListener('click', () => {
 subtotal.textContent = `Rp.
${total(qtyInput.value,price.value,codeInput.value)}`;
});
price.addEventListener('keyup', () => {
 subtotal.textContent = `Rp. ${total(price.value, qtyInput.value,
codeInput.value) }
```

```
});

qtyInput.addEventListener('keyup', () => {
    subtotal.textContent = `Rp. ${total(price.value, qtyInput.value, codeInput.value)}`
});
```

B. Pengecekan npm

#### C. Output tampilan

Tampilan awal:

## Keranjang belanja

• Setelah ditambah 1 item:

#### Keranjang belanja

• Setelah dikurangi 1 item:

# Keranjang belanja

• Kupon diskon:

# Keranjang belanja
